

Bruno Dzięcielski

Next.js Developer

Profile

An aspiring front-end developer, always eager to learn more, being able to effectively self-manage during independent projects and ready to develop real-world applications. Being a solid person equipped with great programming skills, mindset and phenomenal built projects, I am seeking career opportunities as a software engineer.

Recent projects

Ballzone

2D (top-down perspective) real-time game with 2 teams where players try to score a goal and win (like in soccer or hockey). I used WebRTC technology with socket.io to connect players in real-time.

scanningworld

An app where users scan QR Codes in popular places and get points that can be used to redeem some coupons. My part was to create backend in Nest.js and admin dashboard in Next.js.

Collabio

A real-time collaborative whiteboard made using Next.js and socket.io. Users can move on a board, draw lines, shapes, add images and download a drawing.

Shoes-ecommerce

Example shop made from scratch by myself in Next.JS and Strapi containing fake products. It uses all Next.js optimizations like prefetching product pages, optimizing images; has my own design with all the animations and connected Stripe Payments.

Apprenticeships

Software Engineer at Ice Group, Rybnik

October 2021 - November 2021

October 2022 - November 2022

I developed a web application to manage business projects for clients as a part of my apprenticeships.

Education

ZST in Wodzisław Śl.

September 2019

Extra

Self Mod X

August 2022

Selected among the top 4% of applicants to participate in the program. I work with other people to become a better person, developer and English speaker.

Freelance

September 2022

I worked with PlayGate company from France. Goal was to improve and adapt my web app - Collabio (collaborative whiteboard) to be a part of their mobile app for children so they can draw and play mini games. I also built some web pages in WordPress for my friends businesses.
